All American Speedway reserves the right to alter or amend these rules and regulations in the interest of safety, cost control and / or fair competition. Any changes will be posted as an "addendum" to the rules.

It is the responsibility of each competitor to read and understand the contents of this rule book. In the event of a disagreement or dispute regarding the interpretation or application of the rules written herein, the decision of the speedway manager shall prevail.

Illegal components may be confiscated by All American Speedway and become property of the speedway.

All deficient safety issues must be corrected before the car is allowed to compete. All non - safety rules infractions will be addressed by the All American Speedway technical staff and, if deemed to have a performance advantage, may require the competitor to repair before being allowed to compete, or, if deemed acceptable, may require a weight penalty be added for that nights event and the repair to be made before the next event can be participated in.

0.0 Driver Eligibility

Drivers in this division must have prior racing experience. Each driver must present a verifiable racing resume and will be subject to an on track test session to be evaluated on readiness to compete. Drivers for the Jr. Late Model division be at least 10 years old and no older than 16 years old to be eligible. A parent or legal guardian must sign a minor's release form.

0.1 Any driver competing for rookie of the year points or who has competed in fewer than 10 races must display an obvious yellow stripe on the rear bumper of his or her vehicle while competing.

1.0 Competing models

1.1 Open to any, made for asphalt racing, late model perimeter or straight rail tube frame chassis that meets the specifications spelled out in this rule book. Must be a minimum 101" wheel base. (both sides)

2.0 General body rules

2.1 No carbon fiber body panels will be allowed .May use fiberglass ,lightweight fiberglass, plastic or fabricated aluminum sheet body panels.

2.2 Must use a poly style front nose piece, ABC, Muscle car etc.. No exposed front bumpers. If a downforce type dirt late model nose is used than a strict "no contact" policy will be enforced.

A rear bumper cover is recommended but not mandatory.

2.3 The following body dimensions will be enforced and measured with driver out of the car. Cars will be measured at a designated spot in the tech area at the scales.

1. Front nose overhang will be a maximum of 48" as measured from the centerline of the front hubs to the farthest forward point of the car.

2. Rear overhang will be a maximum of 55" as measured from the centerline of the rear axle to the rearward most part of the car including bumper or spoiler or braces ect. Any open rear bumpers will be required to have rounded ends that turn back in towards the rear frame rails. No open tube ends or sharp

edges that can get hooked or cut or damage competitors tires.

3. Maximum rear quarter panel height is 36" measured at the top of the R&L quarter at the base of the spoiler.

4. Maximum rear body width is 72" measured at rear bumper height.

5. Maximum rear spoiler width is 60". Maximum height allowed is 6 1/2" measured from the base of the spoiler at the rear deck to the tallest point. There are no forward braces or end plates or wicker lip edges allowed. Spoilers must be constructed of clear poly carbonate to allow visibility through for competing drivers.

6. The minimum driver side window opening will be 13" measured at the center of the window opening from the top of the door to the edge of the roof.

2.4 All interior panels shall be aluminum or steel and completely seal the drivers compartment from the engine compartment and fuel cell area.

3.0 Weight

All vehicles shall be weighed prior to qualifying and the main events or as requested by track tech staff.

3.1 All added weight shall be painted white with the car number written on all pieces. Must be at least 5lb blocks securely bolted to a main frame rail with 1/2" bolts or secured inside weight boxes. No weight blocks inside the drivers compartment.

3.2 Vehicle weights and left side percentage requirements are as follows...

- | | | | |
|--|-----------------|-----------------|-----------------|
| 1. All cars running the GM sealed approved 602 crate motor | 2875 lbs | 60% left | 6000 rpm |
| 2. All other iron block wet sump engine combinations | 3075 lbs | 58% left | 6000 rpm |

3.3 Maximum engine set back.

1. The open motors and CT525 will be no further back than 2" from the forward most sparkplug to the center of the upper ball joint on the same side.
2. The GM602 will be no further back than 6" from the forward most sparkplug to the center of the upper ball joint on the same side.

4.0 Chassis Any, made for asphalt racing, late model perimeter or straight rail chassis.

4.1 Roll cage shall be a minimum of an 8 point cage. Must have at least 4 horizontal door bars on the driver's side with a minimum of 2 vertical spreaders between each door bar. Right side shall have a minimum of 3 bars. If an "X" pattern is used a horizontal top bar must be installed as the third bar. Must have at least 1 horizontal spreader bar running right to left between the front uprights at dashboard level. Main drivers compartment roll cage shall be constructed of at least 1 3/4" .095 steel tubing.

4.2 All front clip and main frame rails must be constructed out of at least 2x3 .095 box tubing. Rear clip main frame rails must be constructed of at least 2x2 .083 box tubing. All center section main frame rails must be constructed out of at least 2x3 .095 box tubing. Stock Camaro style front clips are allowed.

4.3 All roll cage bars are required to be padded at any point of possible contact with the driver.

4.4 Drivers side door bars must be plated with minimum 1/8 inch steel or 1/4 inch aluminum plate covering at least 2/3's of the door bar area for driver protection.

4.5 Ride height.. there is no minimum ride height rule.. However, competing cars must roll freely over the AAS scale pads and ramps without the use of jacks or additional wood blocks or ramps.

4.6 Wheelbase on all cars shall be a minimum of 101" on the right and left side.

4.7 Maximum front track width is 79" measured outside sidewall to outside sidewall in the front at spindle height.

5.0 Suspension and Steering

5.1 All steering components, Steering box, Idler arm, pitman arm, center link, upper and lower cont. arms and spindles must be steel. Rack and pinion unit and upper control arm cross shafts may be aluminum. Steering Heims and tie rod sleeves may be aluminum.

5.2 A made for racing collapsible type steering column is mandatory. A quick disconnect and a made for racing steering wheel and steering wheel center pad is required.

5.3 Coil springs (1 per wheel) of magnetic steel only may be used.

5.4 Shocks must be steel body single or double adjustable. One per wheel. Aluminum heim ends and

aluminum end caps on the shaft side are ok. May be rebuildable. No remote canister or reservoir type shocks allowed. No remotely adjustable shocks allowed. A weight penalty may be assessed for non-conforming shocks at the AAS technical staff discretion.

5.5 Bump stops are allowed. No double adjustable or canister type shocks allowed.

6.0 Brakes & Hubs

6.1 Must have working brakes on all 4 wheels. Only steel rotors are allowed. No titanium, aluminum, composite or ceramic rotors.

6.2 5x5 or wide 5 hubs are allowed. Must have 5/8 wheel studs. Wheel studs must be of sufficient length that stud thread is visible when lug nut is tightened. A maximum of a 1" thick wheel spacer of either aluminum or steel is allowed as long as there is sufficient wheel stud length to accommodate and maximum track width is not exceeded.

7.0 Engines.

Any American cam in block iron block wet sump motor will be allowed.

See 3.2 for different weight classifications

7.1 Any iron block, wet sump motor will be allowed. Aluminum heads ok. Must run a distributor ignition (no crank fire ignitions) **Max 6000 RPM**

7.2 GM 602 approved sealed crate engine must be ran as delivered from Chevrolet. No altering rebuilding or repairing of these engines will be allowed. Must have GM factory seals verified to the satisfaction of AAS tech staff. The engine must retain the factory harmonic balancer as delivered.

You may run an aftermarket type distributor (Crane/MSD ect.) Coil and box. You may change to an aftermarket valve spring (factory retainers only) that has the same seat pressure and rating as the factory stock valve spring. **Max 6000 RPM**

Altering this motor in any way under the GM seals (oil pan, timing cover, heads, intake) may result in a permanent suspension from racing at AAS and other AAS partner tracks.

8.0 Ignition

HEI or aftermarket distributor may be used.. MSD or Crane style ignition boxes and coils may be used. Must be mounted out of reach of driver in the upper right hand side of the dash area and in such a way that AAS tech staff can easily access and visually inspect as well as verify rpm limiting chip or settings. No crank fire or optical ignition systems No programmable ignitions allowed.

No electronic traction control devices or systems allowed. Penalty for this infraction may result in a permanent suspension from racing at AAS or other AAS partner tracks.

9.0 Fuel and Fuel system

9.1 Any 2bbl or 4 bbl carb may be used.

9.2 All engine / carb. Combinations will be required to run a Keyser 1/2" governor restrictor plate. part # 100 12600 with the 1" restrictors part # 100 126100.

On 4bbl carbs the 1/2" restrictor plate is the only spacer allowed. A 2bbl carb may run a 2 to 4 bbl adaptor above the restrictor plate. No tapered hole adaptors or spacers.

9.3 All engines except the CT525 must run a mechanical fuel pump mounted in the stock location.

9.4 CT525 may run an electric fuel pump system as required with an oil pressure cut off switch.

9.5 No fuel lines shut off valves or return lines may run through the driver's compartment

9.6 A made for racing SFI rated fuel cell and can must be used and mounted in accordance with typical industry standards. Must be mounted a minimum of 8" off the ground.

9.7 All competitors must run Sunoco 110 leaded, Sunoco E-85, E- 85 pump gas or Chevron premium 91 octane pump gas. No blending, altering or fuel additives will be allowed.

10.0 Cooling And Electrical

10.1 A single battery shall be allowed. Must be located securely outside of the driver's compartment.

10.2 A master kill switch clearly marked for location and "on" and "off" that is accessible to the driver and the safety crew, is mandatory.

11.0 Exhaust system and noise requirements

11.1 Mufflers , single or dual, are mandatory and shall be sufficient enough to meet all sound requirements of All American Speedway at all times. No side exit exhaust. All exhaust shall exit under the car. All mufflers must have a turn down that aims the exhaust exit at the ground. It is highly recommended that additional sound adjustability be built in to your exhaust system in the event your vehicle does not meet the sound levels required.

11.2 All vehicles in this division competing, practicing or testing at All American Speedway are required to comply with the mandated maximum sound output restriction. All **individual** vehicles are required meet a maximum decibel output of **90 DBA** or less. No exceptions. Any vehicles found to be exceeding the allowable levels will be black flagged from the race track and required to make necessary repairs before being allowed back on the race track.

12.0 Drive Train

12.1 May use a Ford 9 inch or quick change rear end. Gun drilled axels are allowed. Must be magnetic steel , no titanium axels allowed. Must use floater style hubs. 5x5 or wide 5 is allowed.

12.2 Front loaded quick change rear ends will carry a 25# weight penalty.

12.3 Magnetic steel or aluminum drive shaft may be used. (No carbon fiber) Must be painted white.

12.4 Front and rear drive line safety loops are required.

12.5 Any external clutch manual transmission is allowed. Must have at least (2) working forward gears and (1) working reverse gear. A full containment style bell housing is required.

13.0 Wheels and Tires

13.1 Tires are the Hoosier 8.0-15/970 treaded tire. Approved racing tires are the only tires allowed to be run. You must run your main event on the tires you qualify on. All American Speedway Officials will mark tires prior to qualifying. Damaged tires may only be replaced upon inspection and approval by AAS tech staff.

13.2 Only 8" steel racing wheels are allowed. 5x5 or W-5. May run offset wheels as long as track width requirements are met.

14.0 Safety Requirements

14.1 A professional grade aluminum made for racing seat is required. Shoulder, head, and leg supports are strongly recommended on all seats. **Absolutely no plastic or fiberglass seats of any kind will be allowed.** The seat must be securely mounted to a steel frame and brackets welded to the main roll cage. Seat shall be bolted to the mounts with minimum 3/8" grade 8 bolts and large washers to prevent pull through.

14.2 SFI certified racing seat belts and harness are required. A minimum 3" wide strap(narrowed for Hans device ok) A 5 or 6 point harness with individual double shoulder belts is required (no "Y" type) . Seat belts should include an anti-sub belt to prevent the racer from sliding forward under the lap belts .**Seat belt sets may not be more than 5 years old per the SFI tag.** Belts with missing or unreadable SFI tags will be required to be replaced. Seat belts will be securely fastened to the main roll cage with welded tabs and minimum 1/2" bolts. Seat belts bolted directly to the floor pan will not be allowed. Shoulder belts should be anchored 6" below the shoulder line by either bolting or securing around the spreader bar with the proper hardware.

14.3 Snell approved SA2010 or newer full face racing helmet with a polycarbonate shield or goggles is required. A missing or un-readable Snell or SFI label will require re certification or replacement of helmet. SFI head sock is strongly recommended.

14.4 A Hahns, Hutchins, Zamp or other similar SFI approved head and neck restraint is required to be worn at all times while on the track.

14.5 SFI certified racing suit is required for all drivers at all times on the track. Damaged drivers suits with holes or tears will be required to be replaced .SFI rated gloves, shoes are required. Flame retardant long underwear is highly recommended.

14.6 An on board fire suppression system is mandatory. System shall have a minimum of a 5 lb halon extinguisher in an approved secure mounting bracket. Must be mounted inside the drivers compartment

either under or behind the driver's seat. System must have a minimum of 3 operational nozzles, 1 at the rear of the engine, 1 over the fuel cell and one in the drivers compartment facing the driver from just under the dash area. A quick pull activation cable should be in easy reach of the driver and outside safety crew. A marked pull handle mounted at the base of the "A" pillar upright on the top left door bar is recommended.

14.7 An SFI certified ribbon style window net is required on the driver's side window. Mesh window nets are not allowed. Must be securely fastened to the top door bar at the bottom and have a quick release latch at the top that is easily accessible to both the driver and track safety crew.

14.8 2 way radios are mandatory. Spotter and crew must be able to communicate with driver by radio at all times while on the track. A designated spotter is mandatory and will be required to be present in the spotters stand at all times during the event. The spotter must be clearly identified to the designated AAS spotters official. Spotters must relay information to the driver as requested by AAS official. Any unsportsmanlike like conduct in the spotters stand will not be tolerated. Such conduct by a spotter may result in dismissal from the spotters stand and a black flag for his or her associated driver. Any race car on the track without a spotter in the designated area shall be black flagged from the event.

14.9 Transponders are required and must be mounted 12" behind the centerline of the rear and no higher than 24" off the ground.
